# PARIN BHARDWAJ

parin.bhardwaj123@gmail.com | 8219625431 | VPO Harsour, Teh Barsar, Distt Hamirpur, Himachal Pradesh – 174305

## OBJECTIVE

Motivated engineering student with hands-on experience in Python, Linux, and embedded systems, and a growing foundation in machine learning, seeking to join **Amazon's Summer ML School**. Eager to apply and expand technical skills in a real-world environment, contribute to cutting-edge AI solutions, and grow under the mentorship of industry leaders in a fast-paced, collaborative setting.

## EDUCATION

**B.Tech – Engineering**
*Jawaharlal Nehru Government Engineering College, Sund*

**12th Standard** **81%**
*Seven Star International School, Bani, Hamirpur, HP*

**10th Standard** **91%**
*Seven Star International School, Bani, Hamirpur, HP*

## TECHNICAL SKILLS

**Languages:** Python, C, C++

**Hardware / Platforms:** Raspberry Pi Zero W, ESP32

**Domains:** Embedded Systems, IoT, Backend Development, Machine Learning (Beginner)

**Tools & Software:** Linux, MATLAB, LTspice, Qucs, btop

**Web Technologies:** React, Next.js, Supabase

## EXPERIENCE

**Workshop Facilitator – Cybersecurity & AI** *Dec 25, 2025*
*The Himalayan Heritage School, Shahtalai, Bilaspur, HP*

- Conducted a one-day workshop for 12–15 teachers on Cybersecurity Awareness and AI Integration in Teaching Practices
- Delivered practical guidance on cybersecurity best practices to protect digital assets and maintain online safety
- Introduced AI-powered tools and strategies to enhance classroom engagement, lesson planning, and teaching efficiency
- Effectively communicated complex technical concepts to a non-technical audience in a clear and accessible manner

**Python Instructor – Class 7 to 10** *Dec 30, 2025 – Jan 14, 2026*
*The Himalayan Heritage School, Shahtalai, Bilaspur, HP*

- Conducted a 16-day beginner-level Python programming workshop for Class 7–10 students
- Taught core Python concepts including variables, data types, loops, conditionals, and basic problem-solving
- Designed age-appropriate lessons for students with no prior programming experience
- Helped young learners build a strong foundational understanding of programming and computational thinking

## PROJECTS

**Blood Sync** ***React, Next.js, Supabase | State-Level Hackathon***

- Built a web platform connecting blood donors and recipients using real-time geo-location, matching the nearest donor in the shortest possible time
- Restricted meeting points exclusively to hospitals and blood banks to ensure safety and accountability
- Utilized Supabase for backend database management and Next.js for fast, server-side rendered performance
- Developed collaboratively as a team under time constraints at a state-level hackathon

**Gas Leakage Detection System** ***ESP32, Gas Sensor, Servo Motor, Buzzer, Exhaust Fan***

- Developed an automated IoT safety system that detects gas presence and triggers an immediate multi-step safety response
- Servo motor automatically shuts off the gas cylinder valve upon detection to stop the source
- Simultaneously activates exhaust fans to expel excess gas from the room, minimizing ignition risk
- Integrated a buzzer alarm to alert occupants in real time; built as a collaborative team project

**Automated Attendance System** ***Raspberry Pi Zero W, Fingerprint Sensor, RFID Module, 16×2 LCD***

- Built a two-factor biometric system using RFID card scan followed by fingerprint verification for enhanced security
- Designed for deployment across schools, colleges, offices, factories, and corporate hubs
- Displayed real-time attendance confirmation on a 16×2 LCD screen for instant user feedback
- Monitored complete system performance using btop; developed as a team covering hardware and software
